

Course: HFM Product Overview

Duration	Cost	Prerequisites
2 Days	£1,600	None

Course Description

Our two-day Oracle Hyperion Financial Management (HFM) Product Overview is designed to take project team members through all the essentials of working in a HFM system.

The objective of this course is to familiarise you with HFM terms and concepts and enable you to make informed design decisions with your consultants. Essentially we cover the full five-day HFM Bootcamp course at a higher level in a demo/discussion format, rather than at a hands-on detailed level that administrators and power users would need.

The intended audience may include controllers, directors of financial reporting, accounting and IT analysts who will not be hands-on with the product during implementation and development but who will be providing input into the requirements and design of the HFM solution. Upon completion of this course, you will have an understanding of HFM terms and concepts, and the applicable design considerations.

Please note: This course does not replace the five-day hands on HFM Bootcamp class that administrators will take; nor can it replace the design work that will be provided by your consultants, but it will enhance your involvement in that design process.
