Hyperion Reporting and Intergration

Course: Web Analysis Developer

Duration	Cost	Prerequisites
1 Day	£990	None

Course Description

Our one-day course has been designed to bring Web Analysis developers up to speed on building and designing user interfaces with this flexible java front-end.

We begin by walking you through designing reports, and then the advanced options such as sorting, ranking, data filtering, and formatting.The focus is then shifted to developing forms and dashboard interfaces before finishing with a review of management issues such as security and administration topics.

Course Content

Web Analysis Basics

We take you through the architecture of Hyperion Web Analysis and unravel all of the components. After this short introduction, we begin building ad-hoc reports and show you the drilling behavioursand the member selection options. We cover the data display options for controlling report behaviour. We wrap up the basics by taking you through creating charts and split panel reports with both charts and spreadsheets.

Advanced Reporting Options

Web Analysis has a variety of tools that make analysis of data easier. We look at the advanced formatting options such as sorting and data filtering capabilities, traffic lighting, calculations and charting capabilities of the product. We finish up with miscellaneous topics such as performing updates through Web Analysis, controlling spreadsheet options, user preference options, and options available for printing reports in Web Analysis.

Designing Reports

The Web Analysis Report Designer allows developers to create user-friendly interfaces with navigation controls such as drop-down boxes and radio button groups. Spreadsheets, pinboards, and charts can be driven from various member selection controls so that users can navigate easily to find the information they need. We explore and show you how to build these custom forms using the pallet toolbox. Students will then learn how to design pinboard interfaces to create dashboards of key performance indicators.

Web Analysis Administration

This section addresses the management and deployment of Web Analysis. Topics include security management solutions, web deployment options, managing user preferences, backup and recovery, and migration tips and tricks.
